

HS110 | Introduction to Psychology

Practice Question Paper — Set 1

Total Marks: 50 | Time: 2 Hours Full Syllabus

SECTION A — Multiple Choice Questions (20 Marks)

Each question carries 1 mark. Choose the most appropriate option.

1. The term "psychology" is derived from Greek words meaning:
 - (a) Mind and science
 - (b) Mind and knowledge/study ♦
 - (c) Brain and behaviour
 - (d) Soul and medicine
2. Which of the following is an example of **covert** behaviour?
 - (a) Running a race
 - (b) Laughing at a joke
 - (c) Mentally calculating a bill ♦
 - (d) Clapping after a performance
3. Wilhelm Wundt's method of having trained observers describe their inner experiences precisely is called:
 - (a) Survey
 - (b) Introspection ♦
 - (c) Naturalistic observation
 - (d) Case study
4. Which approach to psychology focuses primarily on observable behaviour and dismisses internal mental states?
 - (a) Humanistic
 - (b) Cognitive
 - (c) Biological
 - (d) Behavioural ♦
5. The Hawthorne effect refers to:
 - (a) Observer bias in laboratory settings
 - (b) Increased effective behaviour when being observed ♦
 - (c) Tendency to answer surveys in socially acceptable ways
 - (d) Fatigue during longitudinal research
6. Correlation does NOT imply:
 - (a) Relationship
 - (b) Causation ♦
 - (c) A measurable pattern
 - (d) A positive or negative direction
7. In an experiment on the effect of caffeine on memory, the amount of caffeine given is the:
 - (a) Dependent variable

- (b) Confounding variable
- (c) Independent variable ♦
- (d) Extraneous variable

8. The part of the brain responsible for language production (fluency of speech) is:

- (a) Wernicke's area
- (b) Broca's area ♦
- (c) Hippocampus
- (d) Amygdala

9. The sympathetic nervous system is most active when a person is:

- (a) Sleeping
- (b) Digesting food
- (c) Afraid or aroused ♦
- (d) Relaxing after a meal

10. Pavlov's dog experiment is a classic demonstration of:

- (a) Operant conditioning
- (b) Observational learning
- (c) Classical conditioning ♦
- (d) Trial-and-error learning

11. When a conditioned response reappears after extinction, it is called:

- (a) Stimulus generalisation
- (b) Stimulus discrimination
- (c) Spontaneous recovery ♦
- (d) Reconditioning

12. Negative reinforcement involves:

- (a) Adding an unpleasant stimulus
- (b) Removing a pleasurable stimulus
- (c) Removing an unpleasant stimulus to strengthen behaviour ♦
- (d) Adding a pleasurable stimulus to weaken behaviour

13. According to George Miller, short-term memory can hold approximately:

- (a) 5 ± 1 items
- (b) 7 ± 2 items ♦
- (c) 10 ± 3 items
- (d) 3 ± 1 items

14. Memories of personal life events (e.g., your first day at IIT) are classified as:

14. Memories of personal life events (e.g., your first day at H1) are classified as:

- (a) Semantic memory
- (b) Procedural memory
- (c) Episodic memory ♦
- (d) Iconic memory

15. Alfred Binet's formula for IQ uses:

- (a) $\text{Social Age} / \text{Chronological Age} \times 100$
- (b) $\text{Mental Age} / \text{Chronological Age} \times 100$ ♦
- (c) $\text{Chronological Age} / \text{Mental Age} \times 100$
- (d) $\text{Mental Age} \times \text{Chronological Age} \times 100$

16. Spearman's **g factor** refers to:

- (a) Genetic intelligence inherited from parents
- (b) General, innate ability to reason and solve problems ♦
- (c) Specific task-related skills
- (d) Gardner's group intelligence theory

17. Which type of intelligence, according to Cattell, declines after adolescence?

- (a) Crystallised intelligence
- (b) Practical intelligence
- (c) Fluid intelligence ♦
- (d) Analytical intelligence

18. The **Drive-Reduction Theory** of motivation was proposed by:

- (a) Abraham Maslow
- (b) Clark Hull ♦
- (c) McClelland
- (d) Sternberg

19. According to Maslow's hierarchy, which need must be satisfied before esteem needs?

- (a) Self-actualisation
- (b) Physiological needs
- (c) Love and belongingness ♦
- (d) Safety needs

20. The **James-Lange Theory** of emotion states that:

- (a) Emotional experience and bodily arousal occur simultaneously
- (b) Cognitive labelling follows physiological arousal
- (c) Bodily reactions occur first, and then the emotion is experienced ♦

- (d) The thalamus triggers both emotion and arousal at the same time

SECTION B — True/False and Match the Following (10 Marks)

Part I — True or False (*1 mark each, 5 marks*)

1. Psychology is considered a science because it relies on empirical evidence and systematic methods. **[True]**
 2. The parasympathetic nervous system activates the "fight-or-flight" response. **[False]**
 3. In classical conditioning, the conditioned stimulus must be presented *before* the unconditioned stimulus. **[True]**
 4. Recognition memory is generally less accurate than recall memory. **[False]**
 5. Crystallised intelligence grows through adulthood. **[True]**
-

Part II — Match the Following (*1 mark each, 5 marks*)

Column A

Column B

- | | |
|-----------------------|---|
| 1. Wernicke's Aphasia | (a) Memory and fear responses |
| 2. Amygdala | (b) Relay station for all senses except smell |
| 3. Thalamus | (c) Fluent but meaningless speech |
| 4. Cerebellum | (d) Balance and coordination |
| 5. Hippocampus | (e) Memory; damaged in Alzheimer's |
-

Answers: 1-c, 2-a, 3-b, 4-d, 5-e

SECTION C — Answer in One Word / Term (10 Marks)

Each answer carries 1 mark.

1. The tendency of researchers to see what they expect to see in observation studies. (*Observer bias*)
 2. A study in which neither the experimenter nor the participants know the group assignment. (*Double-anonymous study*)
 3. The brain's ability to reorganise its structure and function in response to experience or injury. (*Neuroplasticity*)
 4. The learning theory associated with B.F. Skinner and voluntary behaviour. (*Operant conditioning*)
 5. The memory store that holds raw sensory information for a fraction of a second. (*Sensory memory*)
 6. The tendency to remember items at the beginning of a list better than those in the middle. (*Primacy effect*)
 7. Spearman's term for task-specific, acquired intelligence. (*s factor*)
 8. Sternberg's term for "street smarts" — using knowledge to navigate real-life situations. (*Practical intelligence*)
 9. The hormonal signal that tells the body it is satiated and should stop eating. (*Leptin*)
 10. The theory of emotion that states emotional experience and bodily reactions occur simultaneously, mediated by the thalamus. (*Cannon-Bard Theory*)
-

SECTION D — Answer in Brief (10 Marks)

Answer ANY 2 of the following 3 questions. Each carries 5 marks.

Q1. Distinguish between **classical conditioning** and **operant conditioning** with one example each. What role does reinforcement play in operant conditioning?

Q2. Explain the **Information Processing Model of Memory** (Atkinson & Shiffrin, 1968). Describe the three types of memory stores — sensory, short-term, and long-term — with key features of each (duration, capacity, encoding).

Q3. Compare **Maslow's Hierarchy of Needs** and **McClelland's Acquired Needs Theory**. What are the key strengths and one criticism of each?
