

HS110 | Introduction to Psychology

Practice Question Paper — Set 2

Total Marks: 50 | Time: 2 Hours Full Syllabus

SECTION A — Multiple Choice Questions (20 Marks)

Each question carries 1 mark. Choose the most appropriate option.

1. Which of the following best describes "Affect" in the ABC model of psychology?
 - (a) Thoughts and beliefs
 - (b) Observable actions
 - (c) Emotions, feelings, and urges ♦
 - (d) Internal decision-making
2. The first psychological laboratory was established by Wilhelm Wundt in:
 - (a) London, England
 - (b) Leipzig, Germany ♦
 - (c) Paris, France
 - (d) Vienna, Austria
3. Which psychological approach would explain procrastination as a result of unhelpful thinking patterns and overestimating task difficulty?
 - (a) Biological
 - (b) Behavioural
 - (c) Cognitive ♦
 - (d) Sociocultural
4. A clinical psychologist in India must be licensed by which body?
 - (a) Medical Council of India
 - (b) Indian Psychiatric Association
 - (c) Rehabilitation Council of India ♦
 - (d) Indian Council of Medical Research
5. Which of the following is a **drawback** of naturalistic observation?
 - (a) Provides first-hand data
 - (b) Cannot be replicated ♦
 - (c) Allows for controlled conditions
 - (d) Reduces observer bias
6. **Proactive interference** occurs when:
 - (a) New information interferes with retrieval of older information
 - (b) Older information interferes with learning newer information ♦
 - (c) A lack of retrieval cues causes forgetting
 - (d) Emotional distress blocks memory formation
7. In an experiment studying whether sleep duration affects exam scores, the exam score is the:
 - (a) Independent variable

- (b) Confounding variable
- (c) Extraneous variable
- (d) Dependent variable ♦

8. Which brain structure is known as the "relay station" for all sensory information EXCEPT smell?

- (a) Hypothalamus
- (b) Thalamus ♦
- (c) Amygdala
- (d) Hippocampus

9. Damage to the **medulla oblongata** can be fatal because it controls:

- (a) Voluntary muscle movement
- (b) Emotional regulation
- (c) Heartbeat and breathing ♦
- (d) Language comprehension

10. The "puzzle box" experiment demonstrating trial-and-error learning was conducted by:

- (a) B.F. Skinner
- (b) Ivan Pavlov
- (c) Albert Bandura
- (d) Edward Thorndike ♦

11. A student receives a shout-out on the college social media page after volunteering. This is an example of:

- (a) Negative reinforcement
- (b) Positive reinforcement ♦
- (c) Punishment by application
- (d) Punishment by removal

12. Watching a senior student answer questions confidently and then adopting a similar style is an example of:

- (a) Classical conditioning
- (b) Operant conditioning
- (c) Observational learning ♦
- (d) Drive-reduction

13. Echoic memory is the:

- (a) Visual component of sensory memory
- (b) Auditory component of sensory memory ♦

- (c) Emotional component of long-term memory
- (d) Implicit memory for motor skills

14. The phenomenon where memories are rebuilt and can change each time they are recalled is called:

- (a) Retrograde amnesia
- (b) Elaborative rehearsal
- (c) Constructive processing of memory ♦
- (d) Maintenance rehearsal

15. Gardner's intelligence that involves understanding others' emotions and motivations is:

- (a) Intrapersonal intelligence
- (b) Interpersonal intelligence ♦
- (c) Linguistic intelligence
- (d) Existential intelligence

16. A chef who uses years of accumulated cooking techniques is using:

- (a) Fluid intelligence
- (b) Crystallised intelligence ♦
- (c) Analytical intelligence
- (d) g factor

17. Divergent thinking is best described as:

- (a) Finding the single correct answer to a problem
- (b) Using logic to eliminate wrong answers
- (c) Starting from one idea and generating many different possibilities ♦
- (d) Applying previously learned rules to a new situation

18. **Homeostasis** in the context of motivation refers to:

- (a) The body's tendency to maintain a steady internal state ♦
- (b) The satisfaction of secondary drives
- (c) Achieving peak performance through arousal
- (d) Controlling hunger through willpower

19. According to the **Yerkes-Dodson Law**, for a difficult task, which level of arousal leads to the best performance?

- (a) Very high arousal
- (b) Low-moderate arousal ♦
- (c) Very low arousal
- (d) High-moderate arousal

20. The **Schachter-Singer Theory** of emotion involves:

- (a) Bodily reactions occurring before and independently of emotion
 - (b) Both emotional experience and physiological arousal occurring simultaneously
 - (c) Physiological arousal + cognitive labelling from environmental cues ♦
 - (d) Facial expressions generating the emotional experience
-

SECTION B — True/False and Match the Following (10 Marks)

Part I — True or False (*1 mark each, 5 marks*)

1. Longitudinal research studies different groups at a single point in time. **[False]**
 2. The basal ganglia are involved in decision-making, habit learning, and voluntary motor coordination. **[True]**
 3. A fixed-ratio schedule delivers reinforcement after an unpredictable number of responses. **[False]**
 4. Anterograde amnesia involves the inability to form new long-term declarative memories. **[True]**
 5. According to Maslow, growth needs arise from deprivation. **[False]**
-

Part II — Match the Following (*1 mark each, 5 marks*)

Column A	Column B
1. Broca's Aphasia	(a) Acquired through life experience
2. Crystallised Intelligence	(b) Difficulty with expressive/fluent speech
3. Secondary drive	(c) Tendency to believe you "knew it all along"
4. Hindsight bias	(d) Learned through conditioning (e.g., need for approval)
5. Variable ratio schedule	(e) Reinforcement after unpredictable number of responses

Answers: 1-b, 2-a, 3-d, 4-c, 5-e

SECTION C — Answer in One Word / Term (10 Marks)

Each answer carries 1 mark.

1. The research method that measures the statistical relationship between two variables without manipulation. (*Correlational research*)
 2. The nervous system division responsible for the "fight-or-flight" response. (*Sympathetic nervous system*)
 3. The principle that a conditioned response weakens when the unconditioned stimulus is repeatedly withheld. (*Extinction*)
 4. The memory technique of linking new information to something already well-known to create retrieval cues. (*Elaborative rehearsal*)
 5. The type of long-term memory that stores "how to" knowledge (e.g., riding a bicycle). (*Nondeclarative / Implicit memory*)
 6. The bias in surveys where respondents answer in a socially acceptable manner rather than truthfully. (*Courtesy bias*)
 7. Thurstone's primary mental ability involving quickly and accurately perceiving visual details. (*Perceptual Speed*)
 8. The neurological disorder associated with damage to the temporal lobe and amygdala, characterized by memory loss, hypersexuality, and compulsive eating. (*Klüver-Bucy syndrome*)
 9. The type of motivation where a person performs an action because the act itself is internally rewarding. (*Intrinsic motivation*)
 10. The hypothesis stating that projecting a facial expression can influence the emotion felt. (*Facial Feedback Hypothesis*)
-

SECTION D — Answer in Brief (10 Marks)

Answer ANY 2 of the following 3 questions. Each carries 5 marks.

Q1. Explain the **Scientific Method** in psychology. Using the example "Does frequent Instagram use affect attention spans in Gen Z?", walk through each step from perceiving the question to reporting results.

Q2. Describe **three biases** that can affect survey research. For each bias, give the definition and a concrete example from everyday student life.

Q3. Compare the **James-Lange**, **Cannon-Bard**, and **Schachter-Singer** theories of emotion. For each, state (a) the core claim, (b) the physiological focus, and (c) one drawback.
